Backpack Hi-Vis 65 litre - orange

Maximum visibility, work safety and storage space for outdoor use

Safety at work comes first – accidents can be avoided with the right equipment. The EN ISO 20471:2013 standard guarantees optimal visibility for employees in work clothing. You can also safely and conveniently transport work equipment such as spare clothing, helmets, gloves and personal items for outdoor jobs that span several days.

With its high-visibility backpacks, DICOTA offers a reliable solution for challenging work days outdoors. All products meet important procurement criteria, including ergonomics, durability and sustainability. The highest level of quality and functionality meets sustainable materials made from recycled PET bottles – protecting both employees and the environment.

The use of fluorescent fabrics and 3M reflective strips in line with EN ISO 20471:2013 means the backpacks offer excellent visibility, thus improving safety at work in outdoor areas like construction sites and forests and for rescue operations as well as on the way to work. The outer material is water-repellent, certified under EN ISO 4920, Level 4, and the rain cover supplied provides additional protection for heavy downpours. The air-flow system on the back guarantees pleasant air circulation when temperatures rise. The adjustable hip and chest straps and the variable back length ensure comfortable weight distribution and the best ergonomics.

The backpack is designed for outdoor use, with 65 litres of storage space for work clothing and spare clothing. A separate compartment provides space for a work helmet, while shoes can be stored in the bottom of the backpack. Personal items like a smartphone, power bank or torch can be conveniently placed in the front or side pockets. The backpack can be customised with a name or logo patch thanks to the business card compartment on the back and the velcro area.

The backpack Hi-Vis 65 litre offers maximum space, comfort and visibility and is perfect for a demanding day working outdoors. It also improves safety at work while helping to prevent accidents.
